

MATH ACTIVITIES

NUMBER HUNT

- Pick a number and help your child search for that number.
- You can use anything with print such as a newspaper, magazine or junk mail.
- Have your child circle or cut the number out.

EGG CARTON GAMES

- Using a clean egg carton write a number in each section.
- Write the matching number (or dots) on a small strip of paper.
- Have your child place the strip in the matching section.
- This game can be used with numbers, letters, colors or shapes.
- You can create different kinds of matches as your child is ready for them. 6 ::: Bb SS

SHAPE HUNT

- Pick a shape and have your child identify items around the house that match the shape.
- Circle (plate, cup); Rectangle (remote control, tv); Square (table, book)

NUMBER BOOK

- Create a book together by writing a number on each page.
- Have your child draw a matching number of items on each page.

SOCK MATCH

- Let your child help you to sort and match socks after the laundry is completed.

PHONE NUMBER MEMORY

- Teach your child to memorize important phone numbers by writing them, repeating them and making a puzzle out of the number.

HOUSEHOLD GRAPH

- Create a graph to count things throughout the home (windows, doors, closets, chairs).
- Before graphing have your child predict which items there are more and less of.
- After graphing, talk about the predictions and which things there were more or less of.
- Graphs can be used to compare all kinds of things like shoes, colors, food, people, letters.

MEMORY CARDS

- Create memory cards by writing two sets of each number.
- Turn all card face down and have your child turn them over two at a time until they match them all.

NUMBER PUZZLES

- Using the back of a food box (cereal, cookies, etc.) make number puzzles that include the number on one side and the number of objects on the other side.
- Mix the pieces up and have your child put their name together.
- Start small and increase the numbers as your child is consistently successful.

KITCHEN COUNTING

- Let your child help you with cooking activities by counting the amounts of things that are needed and helping to measure them (2 cups of rice, 3 potatoes).
- Have your child set the table and ask for the specific number of items needed (4 plates, 2 spoons).
